You must create a password. If you want, you can do it from the "Password" tab. When activated, you can choose "Copy to clipboard" at the "CAD" tab. When you click on the button, you can paste the content into the field, and then click on "copy". To get this content into your technical menu, you can use a right-click on the CAD tab, and choose "paste to menu" or "pasted to menu". When you have done, you can go to "process" tab and activate the new Autodesk Autocad as an external editor. Now, you have Autodesk Autocad. Variables -----

What's New in the?

Revert to the previous drawing version: When you use the Undo command or the Undo All command, you can quickly return to the previous drawing state. Now you can revert to the previous version without having to scroll up through undo stacks. (video: 1:37 min.) Flow Chart and Network Flow Chart: View designs as a network of relations between blocks or objects, rather than a jumble of entities. To understand how different blocks or objects are related, you can create flow chart or network flow chart blocks. Or, create flow chart and network flow chart drawings, which automatically generate the relationships between different objects. (video: 1:52 min.) Improved 2D Environment: We have improved the 2D Environment. This includes the text tool, change dash and curvilinear text tool, and fly tool. To take advantage of the improvements, you will need to update your 2D Environment settings to use the new tools. (video: 1:41 min.) Pan, Zoom, and Moving: In AutoCAD® 2017, we simplified the keyboard shortcuts for panning, zooming, and moving. The new shortcuts also work with the 2D Environment and with most 3D views. If you've been using different shortcuts to control panning, zooming, and moving, you will want to make the switch. To use the new shortcuts, open the Application menu, select Pan & Zoom, and select the keyboard shortcut you'd like to use. (video: 1:25 min.) Filter drop-down lists: We've improved filter drop-down lists in several places. For example, we've added features for filtering lists of blocks. You can now quickly select one or more block types, select the sort order for blocks, and sort your views by block type. (video: 1:32 min.) Object Data Tab: We've added a new Object Data tab to the Properties palette. You can now set or change the attributes of any object—including layers, text styles, linetypes, layer styles, and block types. In fact, you can also apply new attribute values to blocks and layers at the same time. (video: 1:50 min.) Rotate View by Mouse: You can now rotate any 3D view by a precise amount using the mouse. Just press and hold the
